

Complication diagnosis, treatment & management of medical aesthetic procedures

Background: More than 10 years experience with medical aesthetic procedures and last 8 years study in country as complication management author.

Methods: Cases from all over the Turkey and abroad, surveillance, diagnose, threat and manage of patients,

Results: Treatment and management results were shared with colleagues and patients, both group were satisfied for results.

Discussion: Medical Aesthetic procedures are not new, but uncontrolled, less experience & less training era for medical aesthetics. For that reason, most of patients suffered and faced similar problems. Why do complications occur? Physician, patient and product related causes.

Conclusions: How can a practitioner understand, diagnose, treat and manage minimal & noninvasive medical aesthetic procedures related problems and complications... Complication treatment and management should be add to the training programs and experienced doctors should manage complications.
