

Natural Lips technique: the best choice of the patients all over the world. Clinical experience and principles of safe correction

Filler lip correction is one of the most popular procedures in aesthetic medicine. As a rule, main category of patients are younger patients with the prevailing wishes for volume lip modelling or asymmetry correction.

More older patients apply to clinics mostly wishing to regain lip contour and proportions, to remove wrinkles in perioral zone.

The perioral zone correction is fulfilled with the use of HA fillers.

The presentation contains authorial method of forming inartificial naturally looking lip. Presented techniques take into account the principles of safe correction considering the topographic anatomy of the current zone, the rules of minimization of adverse affects and prevention of complications; structural variants and principle of embryogenesis.

Such method won the recognition of the most demanding patients all around the world.
